Dr Huszák András szájsebész szakorvos, ügyvezető

## Dear Patient,

At our clinic, You have the ability to choose sedation/general anesthesia for a dental procedure.

Complications are unexpected problems that can occur during or after a procedure. Serious or unpleasant complications as a result of general anesthesia are extremely rare.

After receiving anesthesia, you may have a sore throat, headache; you may feel tired, dizzy, sleepy, nauseous or confused for a couple of hours; you also may feel some pain in the trachea.

After the procedure you must remain at the clinic for generally 1 hour. You may leave the clinic once you are fit, but make sure to arrange for a companion.

After sedation/general anesthesia, you must not take any mind altering drugs, consume alcohol or smoke. You must relax. Do not drive or operate any machinery. Stay indoors.

Your anesthetist will explain the way of introducing anesthesia and the possible complications of your treatment based on your own medical history and medication being taken.

Please refer all this information to your anesthetist.

Please ask the questions you may have prior the signing of this form.

I ..... confirm that all aspects of general anesthesia and all the possible complications have been explained to me. I asked all my questions and they have been answered. I confirm that I am having this anesthesia at my own request and I take full responsibility for my decision.

Budapest, .....
